

Package ‘partitionComparison’

August 25, 2017

Type Package

Title Implements Measures for the Comparison of Two Partitions

Version 0.2.2

Date 2017-08-25

Author Fabian Ball [aut, cre, cph, ctb],
Andreas Geyer-Schulz [cph]

Maintainer Fabian Ball <fabian.ball@kit.edu>

Description Provides several measures ((dis)similarity, distance/metric, correlation, entropy) for comparing two partitions of the same set of objects. The different measures can be assigned to three different classes: Pair comparison (containing the famous Jaccard and Rand indices), set based, and information theory based. Many of the implemented measures can be found in Albatineh AN, Niewiadomska-Bugaj M and Mihalko D (2006) <doi:10.1007/s00357-006-0017-z> and Meila M (2007) <doi:10.1016/j.jmva.2006.11.013>. Partitions are represented by vectors of class labels which allow a straightforward integration with existing clustering algorithms (e.g. kmeans()). The package is mostly based on the S4 object system.

partitionComparison: Implements Measures for the Comparison of Two Partitions

Description

Provides several measures ((dis)similarity, distance/metric, correlation, entropy) for comparing two partitions of the same set of objects. The different measures can be assigned to three different classes: Pair comparison (containing the famous Jaccard and Rand indices), set based, and information theory based. Many of the implemented measures can be found in Albatineh AN, Niewiadomska-Bugaj M and Mihalko D (2006) <doi:10.1007/s00357-006-0017-z> and Meila M (2007) <doi:10.1016/j.jmva.2006.11.013>. Partitions are represented by vectors of class labels which allow a straightforward integration with existing clustering algorithms (e.g. kmeans()). The package is mostly based on the S4 object system.

Details

This package provides a large collection of measures to compare two partitions. Some survey articles for these measures are cited below, the seminal papers for each individual measure is provided with the function definition.

Most functionality is implemented as S4 classes and methods so that an adoption is easily possible for special needs and specifications. The main class is `Partition` which merely wraps an atomic vector of length n for storing the class label of each object. The computation of all measures is designed to work on vectors of class labels.

All partition comparison methods can be called in the same way: `<measure method>(p, q)` with `p`, `q` being the two partitions (as `Partition` instances). One often does not explicitly want to transform the vector of class labels (as output of another package's function/algorithm) into `Partition` instances before using measures from this package. For convenience, the function `registerPartitionVectorSignatures` exists which dynamically creates versions of all measures that will directly work with plain R vectors.

Examples

```
# Generate some data
set.seed(42)
data <- cbind(x=c(rnorm(50), rnorm(30, mean=5)), y=c(rnorm(50), rnorm(30, mean=5)))
# Run k-means with two/three centers
data.km2 <- kmeans(data, 2)
data.km3 <- kmeans(data, 3)

# Load this library
library(partitionComparison)
# Register the measures to take ANY input
registerPartitionVectorSignatures(environment())
# Compare the clusters
randIndex(data.km2$cluster, data.km3$cluster)
# [1] 0.8101266
```

adjustedRandIndex	<i>Adjusted Rand Index</i>
-------------------	----------------------------

Description

Compute the Adjusted Rand Index (ARI)

$$\frac{2(N_{00}N_{11} - N_{10}N_{01})}{N'_{01}N_{12} + N'_{10}N_{21}}$$

Usage

```
adjustedRandIndex(p, q)

## S4 method for signature 'Partition,Partition'
adjustedRandIndex(p, q)

## S4 method for signature 'PairCoefficients,missing'
adjustedRandIndex(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Hubert L and Arabie P (1985). “Comparing Partitions.” *Journal of Classification*, **2**(1), pp. 193 – 218.

Examples

```
adjustedRandIndex(new("Partition", c(0, 0, 0, 1, 1)),
  new("Partition", c(0, 0, 1, 1, 1))) == 1/6
```

baulieu1	<i>Baulieu Index 1</i>
----------	------------------------

Description

Compute the index 1 of Baulieu

$$\frac{N^2 - N(N_{10} + N_{01}) + (N_{10} - N_{01})^2}{N^2}$$

Usage

```
baulieu1(p, q)

## S4 method for signature 'Partition,Partition'
baulieu1(p, q)

## S4 method for signature 'PairCoefficients,missing'
baulieu1(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)
q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Examples

```
baulieu1(new("Partition", c(0, 0, 0, 1, 1)),
  new("Partition", c(0, 0, 1, 1, 1))) == 0.76
```

baulieu2

*Baulieu Index 2***Description**

Compute the index 2 of Baulieu

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N^2}$$

Usage

```
baulieu2(p, q)
```

```
## S4 method for signature 'Partition,Partition'
baulieu2(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
baulieu2(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Examples

```
baulieu2(new("Partition", c(0, 0, 0, 1, 1)),
         new("Partition", c(0, 0, 1, 1, 1))) == 0.04
```

classificationErrorDistance
Classification Error Distance

Description

Compute the classification error distance

$$1 - \frac{1}{n} \max_{\sigma} \sum_{C \in \mathcal{P}} |C \cap \sigma(C)|$$

with σ a weighted matching between the clusters of both partitions. The nodes are the classes of each partition, the weights are the overlap of objects.

Usage

```
classificationErrorDistance(p, q)
```

```
## S4 method for signature 'Partition,Partition'
classificationErrorDistance(p, q)
```

Arguments

p	The partition P
q	The partition Q

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions

Hint

This measure is implemented using [lp.assign](#) from the lpSolve package to compute the maximal matching of a weighted bipartite graph.

Examples

```
classificationErrorDistance(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))) == 0.2
```

compareAll	<i>Compare two partitions with all measures</i>
------------	---

Description

Compute the comparison between two partitions for all available measures.

Usage

```
compareAll(p, q)
```

```
## S4 method for signature 'Partition,Partition'
compareAll(p, q)
```

Arguments

p	The partition P
q	The partition Q

Value

Instance of `data.frame` with columns measure and value

Methods (by class)

- p = Partition, q = Partition: Compare given two `Partition` instances

Warning

This method will identify every generic S4 method that has a signature "Partition", "Partition" (including signatures with following "missing" parameters, e.g. "Partition", "Partition", "missing") as a partition comparison measure, **except** this method itself (otherwise: infinite recursion). This means one has to take care when defining other methods with the same signature in order not to produce unwanted side-effects!

Author(s)

## End(Not run)
```

```
computePairCoefficients
```

Compute the four coefficients N_{11} , N_{10} , N_{01} , N_{00}

Description

Given two object partitions P and Q , of same length n , each of them described as a vector of cluster ids, compute the four coefficients (N_{11} , N_{10} , N_{01} , N_{00}) all of the pair comparison measures are based on.

Usage

```
computePairCoefficients(p, q)
```

Arguments

<code>p</code>	The partition P
<code>q</code>	The partition Q

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
pc <- computePairCoefficients(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1)))
N11(pc) == 2
N10(pc) == 2
N01(pc) == 2
N00(pc) == 4
```

czezanowski

*Czezanowski Index***Description**

Compute the Czezanowski index

$$\frac{2N_{11}}{2N_{11} + N_{10} + N_{01}}$$

Usage

```
czezanowski(p, q)

## S4 method for signature 'Partition,Partition'
czezanowski(p, q)

## S4 method for signature 'PairCoefficients,missing'
czezanowski(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)
q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Czezanowski J (1932). "Coefficient of Racial Likeness" Und „Durchschnittliche Differenz". *Anthropologischer Anzeiger*, **9**(3/4), pp. 227–249.

Examples

```
czezanowski(new("Partition", c(0, 0, 0, 1, 1)),
            new("Partition", c(0, 0, 1, 1, 1))) == 0.5
```

dongensMetric	<i>Dongen's Metric</i>
---------------	------------------------

Description

Compute Dongen's metric

$$2n - \sum_{C \in P} \max_{D \in Q} |C \cap D| - \sum_{D \in Q} \max_{C \in P} |C \cap D|$$

Usage

```
dongensMetric(p, q)
```

```
## S4 method for signature 'Partition,Partition'
dongensMetric(p, q)
```

Arguments

p	The partition P
q	The partition Q

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

van Dongen S (2000). "Performance Criteria For Graph Clustering And Markov Cluster Experiments." Technical Report INS-R 0012, CWI.

[projectionNumber](#)

Examples

```
dongensMetric(new("Partition", c(0, 0, 0, 1, 1)),
               new("Partition", c(0, 0, 1, 1, 1))) == 2
```

entropy

*Entropy***Description**

Compute the Shannon entropy

$$-\sum_i p_i \log_b p_i$$

Usage

```
entropy(x, log_base)
```

```
## S4 method for signature 'numeric,numeric'
entropy(x, log_base)
```

```
## S4 method for signature 'Partition,numeric'
entropy(x, log_base)
```

```
## S4 method for signature 'ANY,missing'
entropy(x, log_base = exp(1))
```

Arguments

x	A probability distribution
log_base	Optional base of the logarithm (default: <i>e</i>)

Methods (by class)

- x = Partition, log_base = numeric: Entropy of a partition represented by x

Hint

This method is used internally for measures based on information theory

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
entropy(c(.5, .5)) == log(2)
entropy(c(.5, .5), 2) == 1
entropy(c(.5, .5), 4) == .5

# Entropy of a partition
entropy(new("Partition", c(0, 0, 1, 1, 1))) == entropy(c(2/5, 3/5))
```

fagerMcGowan

*Fager & McGowan Index***Description**

Compute the index of Fager and McGowan

$$\frac{N_{11}}{\sqrt{N_{21}N_{12}}} - \frac{1}{2\sqrt{N_{21}}}$$

Usage

```
fagerMcGowan(p, q)
```

```
## S4 method for signature 'Partition,Partition'
fagerMcGowan(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
fagerMcGowan(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Examples

```
fagerMcGowan(new("Partition", c(0, 0, 0, 1, 1)),
              new("Partition", c(0, 0, 1, 1, 1))) == 0.25
```

folwkesMallowsIndex	<i>Folwkes & Mallows Index</i>
---------------------	------------------------------------

Description

Compute the index of Folwkes and Mallows

$$\sqrt{\frac{N_{11}}{N_{21}} \frac{N_{11}}{N_{12}}}$$

which is a combination of the two Wallace indices.

Usage

```
folwkesMallowsIndex(p, q)

## S4 method for signature 'Partition,Partition'
folwkesMallowsIndex(p, q)

## S4 method for signature 'PairCoefficients,missing'
folwkesMallowsIndex(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

```
folwkesMallowsIndex(new("Partition", c(0, 0, 0, 1, 1)),
                    new("Partition", c(0, 0, 1, 1, 1))) == 0.5
```

gammaStatistics

*Gamma Statistics***Description**

Compute the Gamma statistics

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{\sqrt{N_{21}N_{12}N'_{10}N'_{01}}}$$

Usage

```
gammaStatistics(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
gammaStatistics(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
```

```
gammaStatistics(p, q = NULL)
```

Arguments

`p` The partition P or an instance of [PairCoefficients](#)

`q` The partition Q or NULL

Methods (by class)

- `p = Partition, q = Partition`: Compute given two partitions
- `p = PairCoefficients, q = missing`: Compute given the pair coefficients

Examples

```
goodmanKruskal(new("Partition", c(0, 0, 0, 1, 1)),
               new("Partition", c(0, 0, 1, 1, 1))) == 1/3
```

gowerLegendre

*Gower & Legendre Index***Description**

Compute the index of Gower and Legendre

$$\frac{N_{11} + N_{00}}{N_{11} + \frac{1}{2}(N_{10} + N_{01}) + N_{00}}$$

Usage

```
gowerLegendre(p, q)
```

```
## S4 method for signature 'Partition,Partition'
gowerLegendre(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
gowerLegendre(p, q)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

```

hamann

*Hamann Coefficient***Description**

Compute the Hamann coefficient

$$\frac{(N_{11} + N_{00}) - (N_{10} + N_{01})}{N}$$

Usage

```
hamann(p, q)

## S4 method for signature 'Partition,Partition'
hamann(p, q)

## S4 method for signature 'PairCoefficients,missing'
hamann(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
hamann(new("Partition", c(0, 0, 0, 1, 1)), new("Partition", c(0, 0, 1, 1, 1))) == 0.2
```

jaccardCoefficient	<i>Jaccard Coefficient</i>
--------------------	----------------------------

Description

Compute the Jaccard coefficient

$$\frac{N_{11}}{N_{11} + N_{10} + N_{01}}$$

Usage

```
jaccardCoefficient(p, q)

## S4 method for signature 'Partition,Partition'
jaccardCoefficient(p, q)

## S4 method for signature 'PairCoefficients,missing'
jaccardCoefficient(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Jaccard P (1908). “Nouvelles Recherches Sur La Distribution Florale.” *Bulletin de la Société Vaudoise des Sciences Naturelles*, **44**(163), pp. 223 – 270.

Examples

```
jaccardCoefficient(new("Partition", c(0, 0, 0, 1, 1)),
  new("Partition", c(0, 0, 1, 1, 1))) == 1/3
```

 kulczynski

Kulczynski Index

Description

Compute the Kulczynski index

$$\frac{1}{2} \left(\frac{N_{11}}{N_{21}} + \frac{N_{11}}{N_{12}} \right)$$

Usage

```
kulczynski(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
kulczynski(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
```

```
kulczynski(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Examples

```
kulczynski(new("Partition", c(0, 0, 0, 1, 1)),
            new("Partition", c(0, 0, 1, 1, 1))) == 0.5
```

larsenAone

Larsen & Aone Measure

Description

Compute the measure of Larsen and Aone

$$\frac{1}{|\mathcal{P}|} \sum_{C \in \mathcal{P}} \max_{D \in \mathcal{Q}} \frac{2|C \cap D|}{|C| + |D|}$$

Usage

```
larsenAone(p, q)
```

```
## S4 method for signature 'Partition,Partition'
larsenAone(p, q)
```

Arguments

p	The partition P
q	The partition Q

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Examples

```
larsenAone(new("Partition", c(0, 0, 0, 1, 1)),
            new("Partition", c(0, 0, 1, 1, 1))) == 0.8
```

lermanIndex

*Lerman Index***Description**

Compute the Lerman index

$$\frac{N_{11} - E(N_{11})}{\sqrt{\sigma^2(N_{11})}}$$

Usage

```
lermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,missing'
lermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,PairCoefficients'
lermanIndex(p, q, c = NULL)
```

Arguments

p The partition P

q The partition Q

c [PairCoefficients](#) or NULL

Methods (by class)

- p = Partition, q = Partition, c = missing: Compute given two partitions
- p = Partition, q = Partition, c = PairCoefficients: Compute given the partitions and pair coefficients

Author(s)

Examples

```
lermanIndex(new("Partition", c(0, 0, 0, 1, 1)),
             new("Partition", c(0, 0, 1, 1, 1))) == 2/sqrt(21)
```

mcconnaughey

*McConnaughey Index***Description**

Compute the McConnaughey index

$$\frac{N_{11}^2 - N_{10}N_{01}}{N_{21}N_{12}}$$

Usage

```
mcconnaughey(p, q)
```

```
## S4 method for signature 'Partition,Partition'
mcconnaughey(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
mcconnaughey(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Fabian Ball <fabian.ball@kit.edu>

References

McConnaughey BH and Laut LP (1964). *The Determination and Analysis of Plankton Communities*. Lembaga Penelitian Laut.

Examples

```
mcconnaughey(new("Partition", c(0, 0, 0, 1, 1)),
              new("Partition", c(0, 0, 1, 1, 1))) == 0
```

minkowskiMeasure	<i>Minkowski Measure</i>
------------------	--------------------------

Description

Compute the Minkowski measure

$$\sqrt{\frac{N_{10} + N_{01}}{N_{11} + N_{10}}}$$

Usage

```
minkowskiMeasure(p, q)

## S4 method for signature 'Partition,Partition'
minkowskiMeasure(p, q)

## S4 method for signature 'PairCoefficients,missing'
minkowskiMeasure(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Examples

```
minkowskiMeasure(new("Partition", c(0, 0, 0, 1, 1)),
                  new("Partition", c(0, 0, 1, 1, 1))) == 1
```

mirkinMetric

Mirkin Metric

Description

Compute the Mirkin metric

$$2(N_{10} + N_{01})$$

Usage

```
mirkinMetric(p, q)
```

```
## S4 method for signature 'Partition,Partition'
mirkinMetric(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
mirkinMetric(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

             new("Partition", c(0, 0, 1, 1, 1))) == 8
```

mutualInformation	<i>Mutual Information</i>
-------------------	---------------------------

Description

Compute the mutual information

$$\sum_{C \in P} \sum_{D \in Q} \frac{|C \cap D|}{n} \log n \frac{|C \cap D|}{|C||D|}$$

Usage

```
mutualInformation(p, q)
```

```
## S4 method for signature 'Partition,Partition'
mutualInformation(p, q)
```

Arguments

p	The partition P
q	The partition Q

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions

Examples

```
mutualInformation(new("Partition", c(0, 0, 0, 1, 1)),
  new("Partition", c(0, 0, 1, 1, 1))) == 4/5*log(5/3) + 1/5*log(5/9)
```

N	<i>Method to retrieve the complex coefficient N</i>
---	--

Description

It is defined as $N = N_{11} + N_{10} + N_{01} + N_{00}$ which equals $\binom{n}{2}$ with n the number of objects

Usage

```
N(obj)

## S4 method for signature 'PairCoefficients'
N(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N00	<i>Method to retrieve the coefficient N_{00}</i>
-----	---

Description

Method to retrieve the coefficient N_{00}

Usage

```
N00(obj)

## S4 method for signature 'PairCoefficients'
N00(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N01	<i>Method to retrieve the coefficient N_{01}</i>
-----	---

Description

Method to retrieve the coefficient N_{01}

Usage

N01(obj)

```
## S4 method for signature 'PairCoefficients'
N01(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N01p	<i>Method to retrieve the complex coefficient N'_{01}</i>
------	--

Description

It is defined as $N'_{01} = N_{00} + N_{01}$

Usage

N01p(obj)

```
## S4 method for signature 'PairCoefficients'
N01p(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N10	<i>Method to retrieve the coefficient N_{10}</i>
-----	---

Description

Method to retrieve the coefficient N_{10}

Usage

```
N10(obj)

## S4 method for signature 'PairCoefficients'
N10(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N10p	<i>Method to retrieve the complex coefficient N'_{10}</i>
------	--

Description

It is defined as $N'_{10} = N_{00} + N_{10}$

Usage

```
N10p(obj)

## S4 method for signature 'PairCoefficients'
N10p(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N11	<i>Method to retrieve the coefficient N_{11}</i>
-----	---

Description

Method to retrieve the coefficient N_{11}

Usage

```
N11(obj)

## S4 method for signature 'PairCoefficients'
N11(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N12	<i>Method to retrieve the complex coefficient N_{12}</i>
-----	---

Description

It is defined as $N_{12} = N_{11} + N_{01}$

Usage

```
N12(obj)

## S4 method for signature 'PairCoefficients'
N12(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

N21

Method to retrieve the complex coefficient N_{21} **Description**

It is defined as $N_{21} = N_{11} + N_{10}$

Usage

N21(obj)

```
## S4 method for signature 'PairCoefficients'
N21(obj)
```

Arguments

obj Instance of [PairCoefficients](#)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

normalizedLermanIndex *Normalized Lerman Index***Description**

Compute the normalized Lerman index

$$L(P, Q) / \sqrt{L(P, P)L(Q, Q)}$$

where L is the Lerman index.

Usage

normalizedLermanIndex(p, q, c = NULL)

```
## S4 method for signature 'Partition,Partition,missing'
normalizedLermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,PairCoefficients'
normalizedLermanIndex(p, q,
  c = NULL)
```

Arguments

p The partition P
 q The partition Q
 c [PairCoefficients](#) or NULL

Methods (by class)

- p = Partition, q = Partition, c = missing: Compute given two partitions
- p = Partition, q = Partition, c = PairCoefficients: Compute given the partitions and pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

[lermanIndex](#)

Examples

```
normalizedLermanIndex(new("Partition", c(0, 0, 0, 1, 1)),
                      new("Partition", c(0, 0, 1, 1, 1))) == 1/6
```

normalizedMutualInformation

Normalized Mutual Information

Description

Compute the mutual information (*MI*) which is normalized either by the minimum/maximum partition entropy (*H*)

$$\frac{MI(P, Q)}{\varphi(H(P), H(Q))}, \varphi \in \{\min, \max\}$$

or the sum

$$\frac{2 \cdot MI(P, Q)}{H(P) + H(Q)}$$

Usage

```
normalizedMutualInformation(p, q, type = c("min", "max", "sum"))
```

```
## S4 method for signature 'Partition,Partition,character'
normalizedMutualInformation(p, q,
  type = c("min", "max", "sum"))
```

```
## S4 method for signature 'Partition,Partition,missing'
normalizedMutualInformation(p, q,
  type = NULL)
```

Arguments

p	The partition P
q	The partition Q
type	One of "min" (default), "max" or "sum"

Methods (by class)

- p = Partition, q = Partition, type = character: Compute given two partitions
- p = Partition, q = Partition, type = missing: Compute given two partitions with type="min"

normalizedMutualInformation(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1)), "max")
```

PairCoefficients-class

S4 class to represent coefficients of object pairs for the comparison of two object partitions (say P and Q).

Description

S4 class to represent coefficients of object pairs for the comparison of two object partitions (say P and Q).

Slots

- N11 The number of object pairs that are in both partitions together in a cluster
- N00 The number of object pairs that are in no partition together in a cluster
- N10 The number of object pairs that are only in partition P together in a cluster
- N01 The number of object pairs that are only in partition Q together in a cluster

Author(s)

Fabian Ball <fabian.ball@kit.edu>

See Also

[N11 N10 N01 N00](#)

Partition-class	<i>Simple S4 class to represent a partition of objects as vector of class labels.</i>
-----------------	---

Description

This class is a wrapper around a vector but allows only the atomic vectors logical, numeric, integer, complex, character, raw. The reason for this is that only those types seem to make sense as class labels. Furthermore, class labels are immutable.

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
p <- new("Partition", c(0, 0, 1, 1, 1))
q <- new("Partition", c("a", "a", "b", "b", "b"))

## Not run:
# This won't work:
new("Partition", c(list("a"), "a", "b", "b", "b"))
p[2] <- 2

## End(Not run)
```

pearson	<i>Pearson Index</i>
---------	----------------------

Description

Compute the Pearson index

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N_{21}N_{12}N'_{01}N'_{10}}$$

Usage

```
pearson(p, q)

## S4 method for signature 'Partition,Partition'
pearson(p, q)

## S4 method for signature 'PairCoefficients,missing'
pearson(p, q)
```

Arguments

- p The partition P or an instance of [PairCoefficients](#)
- q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Pearson K (1926). “On the Coefficient of Racial Likeness.” *Biometrika*, **18**(1/2), pp. 105–117. ISSN 0006-3444, doi: [10.2307/2332498](https://doi.org/10.2307/2332498).

Examples

```
pearson(new("Partition", c(0, 0, 0, 1, 1)),
        new("Partition", c(0, 0, 1, 1, 1))) == 1/144
```

peirce	<i>Peirce Index</i>
--------	---------------------

Description

Compute the Peirce index

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N_{21}N'_{01}}$$

Usage

```
peirce(p, q)

## S4 method for signature 'Partition,Partition'
peirce(p, q)

## S4 method for signature 'PairCoefficients,missing'
peirce(p, q = NULL)
```

Arguments

- p The partition P or an instance of [PairCoefficients](#)
- q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Peirce CS (1884). “The Numerical Measure of the Success of Predictions.” *Science*, **4**(93), pp. 453–454.

Examples

```

```

projectionNumber

Compute the projection number of two partitions

Description

Given two partitions (p, q) represented as vectors of cluster ids, compute the projection number which is the sum of maximum cluster overlaps for all clusters of P to any cluster of Q .

Usage

```
projectionNumber(p, q)
```

Arguments

p	Partition P
q	Partition Q

Author(s)

Fabian Ball <fabian.ball@kit.edu>

See Also

[dongensMetric](#)

Examples

```
projectionNumber(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1)) == 4
```

randIndex	<i>Rand Index</i>
-----------	-------------------

Description

Compute the Rand index

$$\frac{N_{11} + N_{00}}{N}$$

Usage

```
randIndex(p, q)
```

```
## S4 method for signature 'Partition,Partition'
randIndex(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
randIndex(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Rand WM (1971). "Objective Criteria for the Evaluation of Clustering Algorithms." *Journal of the American Statistical Association*, **66**(336), pp. 846 – 850.

Examples

```
randIndex(new("Partition", c(0, 0, 0, 1, 1)),
          new("Partition", c(0, 0, 1, 1, 1))) == 0.6
```

registerPartitionVectorSignatures

Make comparison measures usable with any vectors

Description

The comparison measures are defined to use the class [Partition](#) as parameters. If you do not want to explicitly convert an arbitrary vector of class labels (probably as a result from another package's algorithm) into a [Partition](#) instance, calling this function will create methods for all measures that allow "ANY" input which is implicitly converted to [Partition](#).

Usage

```
registerPartitionVectorSignatures(e)
```

Arguments

`e` The environment to register the methods in (mostly `environment()` is fine)

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
library(partitionComparison)
randIndex(new("Partition", c(0, 0, 0, 1, 1)), new("Partition", c(0, 0, 1, 1, 1)))
# [1] 0.6
## Not run: randIndex(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1))
# Error in (function (classes, fdef, mtable) :
# unable to find an inherited method for function 'randIndex' for signature '"numeric", "numeric"'
registerPartitionVectorSignatures(environment())
randIndex(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1))
# [1] 0.6
```

rogersTanimoto

Rogers & Tanimoto Index

Description

Compute the index of Rogers and Tanimoto

$$\frac{N_{11} + N_{00}}{N_{11} + 2(N_{10} + N_{01}) + N_{00}}$$

Usage

```
rogersTanimoto(p, q)

## S4 method for signature 'Partition,Partition'
rogersTanimoto(p, q)

## S4 method for signature 'PairCoefficients,missing'
rogersTanimoto(p, q)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)
q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Rogers DJ and Tanimoto TT (1960). “A Computer Program for Classifying Plants.” *Science*, **132**(3434), pp. 1115–1118. ISSN 0036-8075, 1095-9203, doi: [10.1126/science.132.3434.1115](https://doi.org/10.1126/science.132.3434.1115).

Examples

```
rogersTanimoto(new("Partition", c(0, 0, 0, 1, 1)),
               new("Partition", c(0, 0, 1, 1, 1))) == 3/7
```

russelRao

Russel & Rao Index

Description

Compute the index of Russel and Rao

$$\frac{N_{11}}{N}$$

Usage

```
russelRao(p, q)

## S4 method for signature 'Partition,Partition'
russelRao(p, q)

## S4 method for signature 'PairCoefficients,missing'
russelRao(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Russel PF and Rao TR (1940). "On Habitat and Association of Species of Anopheline Larvae in South-Eastern Madras." *Journal of the Malaria Institute of India*, **3**(1), pp. 153–178.

Examples

```
russelRao(new("Partition", c(0, 0, 0, 1, 1)),
           new("Partition", c(0, 0, 1, 1, 1))) == 0.2
```

rvCoefficient	<i>RV Coefficient</i>
---------------	-----------------------

Description

Compute the RV coefficient

$$\frac{n + 2N_{11}(p)}{\sqrt{(2N_{21}(p) + n)(2N_{12}(p) + n)}}$$

Usage

```
rvCoefficient(p, q)

## S4 method for signature 'Partition,Partition'
rvCoefficient(p, q)

## S4 method for signature 'PairCoefficients,missing'
rvCoefficient(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- `p = Partition, q = Partition`: Compute the RV coefficient given two partitions
- `p = PairCoefficients, q = missing`: Compute the RV coefficient given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Robert P and Escoufier Y (1976). “A Unifying Tool for Linear Multivariate Statistical Methods: The RV- Coefficient.” *Journal of the Royal Statistical Society. Series C (Applied Statistics)*, **25**(3), pp. 257 – 265. ISSN 00359254.

Youness G and Saporta G (2004). “Some Measures of Agreement between Close Partitions.” *Student*, **51**, pp. 1 – 12.

Examples

```
rvCoefficient(new("Partition", c(0, 0, 0, 1, 1)),
             new("Partition", c(0, 0, 1, 1, 1))) == 9 / 13
```

sokalSneath1

Sokal & Sneath Index 1

Description

Compute the index 1 of Sokal and Sneath

$$\frac{1}{4} \left(\frac{N_{11}}{N_{21}} + \frac{N_{11}}{N_{12}} + \frac{N_{00}}{N'_{10}} + \frac{N_{00}}{N'_{01}} \right)$$

Usage

```
sokalSneath1(p, q)
```

```
## S4 method for signature 'Partition,Partition'
sokalSneath1(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
sokalSneath1(p, q = NULL)
```

Arguments

`p` The partition P or an instance of [PairCoefficients](#)

`q` The partition Q or NULL

Methods (by class)

- `p = Partition, q = Partition`: Compute given two partitions
- `p = PairCoefficients, q = missing`: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Sokal RR and Sneath PHA (1963). *Principles of numerical taxonomy*.. Freeman, San Francisco.

Examples

```
sokalSneath1(new("Partition", c(0, 0, 0, 1, 1)),
             new("Partition", c(0, 0, 1, 1, 1))) == 7/12
```

sokalSneath2	<i>Sokal & Sneath Index 2</i>
--------------	-----------------------------------

Description

Compute the index 2 of Sokal and Sneath

$$\frac{N_{11}}{N_{11} + 2(N_{10} + N_{01})}$$

Usage

```
sokalSneath2(p, q)

## S4 method for signature 'Partition,Partition'
sokalSneath2(p, q)

## S4 method for signature 'PairCoefficients,missing'
sokalSneath2(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Sokal RR and Sneath PHA (1963). *Principles of numerical taxonomy*.. Freeman, San Francisco.

Examples

```
sokalSneath2(new("Partition", c(0, 0, 0, 1, 1)),
             new("Partition", c(0, 0, 1, 1, 1))) == 0.2
```

sokalSneath3	<i>Sokal & Sneath Index 3</i>
--------------	-----------------------------------

Description

Compute the index 3 of Sokal and Sneath

$$\frac{N_{11}N_{00}}{\sqrt{N_{21}N_{12}N'_{01}N'_{10}}}$$

Usage

```
sokalSneath3(p, q)

## S4 method for signature 'Partition,Partition'
sokalSneath3(p, q)

## S4 method for signature 'PairCoefficients,missing'
sokalSneath3(p, q = NULL)
```

Arguments

p	The partition P or an instance of PairCoefficients
q	The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

Fabian Ball <fabian.ball@kit.edu>

References

Sokal RR and Sneath PHA (1963). *Principles of numerical taxonomy*. Freeman, San Francisco.

Examples

```
sokalSneath3(new("Partition", c(0, 0, 0, 1, 1)),
             new("Partition", c(0, 0, 1, 1, 1))) == 1/3
```

 variationOfInformation

Variation of Information

Description

Compute the variation of information

$$H(P) + H(Q) - 2MI(P, Q)$$

where MI is the mutual information, H the partition entropy

Usage

```
variationOfInformation(p, q)
```

```
## S4 method for signature 'Partition,Partition'
variationOfInformation(p, q)
```

Arguments

p	The partition P
q	The partition Q

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions

Author(s)

Fabian Ball <fabian.ball@kit.edu>

Examples

```
round(variationOfInformation(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 6) == 0.763817
```

wallaceI

Wallace I

Description

Compute Wallace' index I

$$\frac{N_{11}}{N_{21}}$$

Usage

```
wallaceI(p, q)
```

```
## S4 method for signature 'Partition,Partition'
wallaceI(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
wallaceI(p, q = NULL)
```

Arguments

p The partition *P* or an instance of [PairCoefficients](#)

q The partition *Q* or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

Author(s)

```

wallaceII

*Wallace II***Description**

Compute Wallace' index II

$$\frac{N_{11}}{N_{12}}$$

Usage

```
wallaceII(p, q)
```

```
## S4 method for signature 'Partition,Partition'
wallaceII(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
wallaceII(p, q = NULL)
```

Arguments

p The partition P or an instance of [PairCoefficients](#)

q The partition Q or NULL

Methods (by class)

- p = Partition, q = Partition: Compute given two partitions
- p = PairCoefficients, q = missing: Compute given the pair coefficients

```

[<-,Partition-method *Subsetting [Partition](#) instances*

Description

This method overrides the standard subsetting to prevent alteration (makes partitions, i.e. class labels, immutable).

Usage

```
## S4 replacement method for signature 'Partition'  
x[i, j] <- value
```

Arguments

x	A Partition instance
i	Extract
j	Extract
value	Extract
